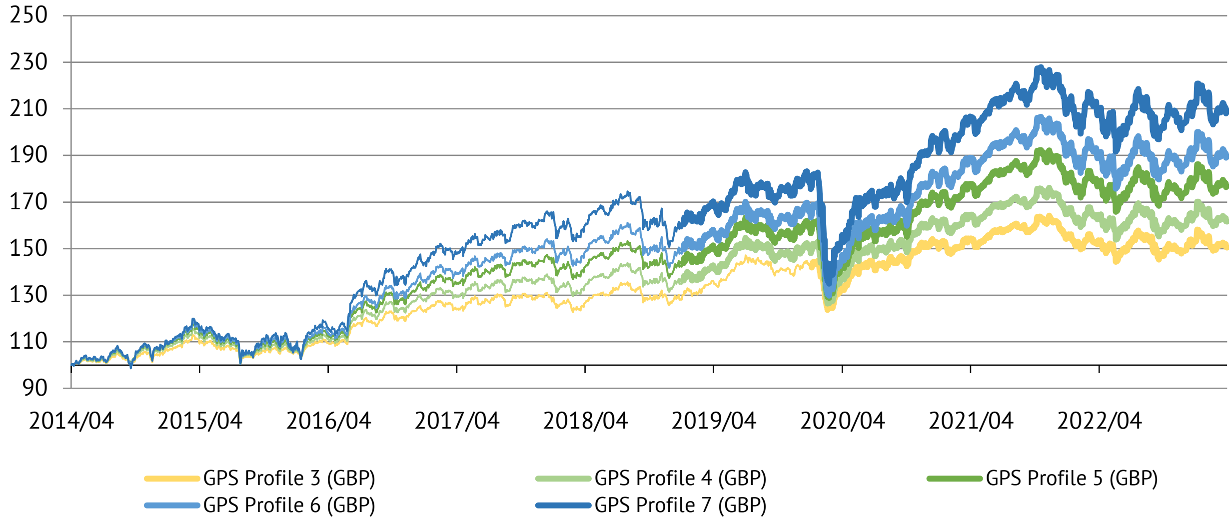
GLOBAL PORTFOLIO SERIES PERFORMANCE (GBP UCITS IMPLEMENTATION)

April 2023

PortfolioMetrix Global Portfolio Series Performance (GBP) - UCITS



Methodology

Returns are annualised when the measurement period is greater than one year (except if stated otherwise) and risk is calculated by using the weekly standard deviation of returns, annualised. The cash basis for the benchmark is determined by the International Monetary Fund's Special Drawing Rights (SDR), estimating a representative global cash benchmark. The performance composite of the profile is compiled from two sources, the first contributes performance from inception to 2019/01/31 for Profiles 4 to 7 and from inception to 2020/01/31 for Profile 3 and was based on fully investable model portfolios made available at Capital International Group - this can be clearly identified in the performance chart as a thin-weight blue time series. Thereafter the performance is based on the Blended UCITS methodology (Interpolated Solution), as identified by a thick-weight blue time series. Full calculation methodology available on request.
